

## Hydro Excavation: The Safest Approach for Industrial and Utility Needs

### Working Safer as We Cope with Coronavirus

As an **industry leader** in countless utility, industrial and construction projects, our company has been deemed an “essential critical infrastructure provider” by the United States government. During these unprecedented and uncertain times, we are expanding our commitment to the communities we serve. The health and safety of our employees, customers, and communities have always been our first priority, and now we’re proud to say we’re taking that commitment to an entirely new level!

Power and gas companies have recently added monetary trucks to daily use on utility sites that would normally use mechanical hand tools (shovels, excavators, backhoes, augers, etc.) to eliminate the risk of striking a buried, unmarked line and disrupting an entire community. When a line is hit — such as a gas line — it is typical for the utility to be shut off.

**Safety. Excavation. Restoration. Productivity.**

Once the line has been repaired, the gas company may then have to go into each house to relight the pilot. This becomes an understandable COVID-19 risk for the workers having to enter these homes.

From clearing worksites to digging holes for utility poles, the tools mentioned above can be extremely useful. But mistakes can happen. Inexperience can and often does lead to human error and unanticipated and expensive setbacks such as damage to underground utilities.

Additionally, since the onset of the global pandemic known as COVID-19, we’re seeing more homeowners taking a hands-on approach to various home improvement projects such as pool and deck installations. This too is resulting in more instances of underground utility line damage.

One solution to this growing problem is hydro excavation, an environmentally safe process that uses highly pressurized water streams to target a specific area for extraction. As the water is pumped

into the ground, the extracted soil is carefully recovered by an industrial-safe vacuum that transports the debris into a truck-mounted tank for delivery to a designated disposal site.

Whether we're faced with the challenges of a powerful storm, a global pandemic or a well-intentioned do-it-yourselfer, the experts at HydroExcavators take great pride in providing essential services to minimize disruption and ensure ongoing safety in communities from coast to coast. And remember, before you dig, always call 811 to protect from hitting underground lines.

So as you can see, **we offer practical solutions** for municipalities, large corporations and power companies, small businesses and even residential construction projects. From large-scale excavation services to working with the average homeowner to safely clear the way for the next home improvement project, we are always at the ready. Contact us today for more information.

### Always On Call, 24/7

Hydro-X is always on call. Sure, it's great when we can plan ahead, but Mother Nature often has other

plans and accidents happen unexpectedly. Should a crisis occur, just call us and we'll get our experienced team on-site as quickly and safely as possible. We have operators and trucks stationed across the U.S. for quick, easy access to your location.

Our operators are highly trained professionals who know how to:

- Work fast
- Work efficiently
- Work safely
- Work with respect for people and the environment
- Work under all conditions, from well-planned to emergencies

Contact us when planning your next project, or when the unexpected occurs. **We are committed to a safe, well-thought-out response!**

### About HydroExcavators

HydroExcavators is a preferred supplier to the utility industry. When it's time to get the job done right, there can be no excuses. Our operators are highly trained professionals who know how to work fast, efficiently, safely and with respect for people and the environment ... qualities that take on even greater importance during times of national crisis such as COVID-19.

For more information, please call 1.877.6HYDROX (1.877.649.3769) or visit [www.hydroexcavators.com](http://www.hydroexcavators.com) today!
